

# Duo-Scan 3

See it all with a 170° view

## 170 degree scanning

The Duo-Scan cattle ultrasound scanner allows you to complete your pregnancy checks in less time than other pregnancy detection methods, with the ability to scan up to approx 10x the area of a linear scanner. You can make diagnosis quickly by speeding up your entire pregnancy check with a high image quality, larger view area and "arm-free" radial probe.

## Robust

The ergonomic die-cast aluminium probe is durable and robust. The water resistant Duo-Scan module is designed to withstand the rigorous farm environment.

## Wide angle image

Duo-Scan is the only scanner in the world that provides a 170° sector image, making this probe capable of detecting bovine pregnancy from 16 to 32 cm in depth.

## Easy to use

Duo-Scan is quick and simple to use with its pre-programmed settings, five function buttons, on screen battery level indicator and a battery that is easy to change.

## Effective

Duo-Scan's unique radial sector probe makes the process of scanning quicker, and minimises trauma to the animal as well as the operator. Replacing manual palpation with Duo-Scan allows the operator to quickly and effectively diagnose pregnancy status without manipulating or jeopardising foetal viability.

## Portable

The Duo-Scan is lightweight and easy to carry with rechargeable batteries that provide up to 7 hours of continuous battery life.

## Quicker examinations

The entire process of scanning is accelerated due to the enlarged view, reduced effort in probe positioning, and faster identification of foetal structures.

## Flexible Options

The Duo-Scan 3 offers multiple viewing options including the lightweight NFI5000 Monocular Head Mount display, BUGs Binoculars or monitor varieties, two interchangeable probes, multiple frequency settings and battery or mains power, you couldn't ask for more.

NFI5000 Monocular

BUG Binocular

LCD Remote Display

## Accessories

Battery NiMH/SLA

Turtle Charger

PVC Backpack

Radial Probe

Axial Probe

Video Cable
